Summary

Civil engineer with fourteen years designing and delivering transportation, stormwater and municipal infrastructure. Leads multidisciplinary teams from feasibility through construction, keeps projects on budget and in front of permitting risk, and mentors junior engineers toward licensure.

Experience

Senior Project Engineer | Prairie Infrastructure Partners 2020 – Present

- Lead design of a $48M interchange rebuild, coordinating structural, geotechnical and traffic consultants through detailed design and tender.
- Cut bridge deck replacement schedule by eleven weeks by resequencing traffic staging and precast girder deliveries with the contractor.
- Run monthly cost reviews with the city; delivered three consecutive projects within two percent of the approved budget.
- Prepared stormwater management reports and erosion control plans that cleared provincial permitting on first submission.
- Mentor four EITs through licensure, reviewing calculations, drawings and field reports every week.
- Wrote the firm's construction-phase services guide, now used on every municipal contract it administers.
- Represented the firm on the city's design standards committee, drafting the revised roadway cross-section chapter.
- Won two competitive proposals worth $3.1M in fees by leading the technical approach and the fee estimate.

Project Engineer | Bowridge Engineering 2016 – 2020

- Designed 22 km of arterial road upgrades in Civil 3D, including grading, drainage and utility relocations.
- Managed construction inspection for a $12M underpass, signing off on concrete pours, rebar placement and backfill compaction.
- Negotiated change orders with contractors, saving $640K against the original claims.
- Led public open houses and wrote the engagement summaries that council used to approve the preferred alignment.
- Built a QA checklist for drawing submissions that halved the number of review comments from the city.
- Coordinated utility crossings with gas, power and telecom owners and kept the conflict matrix current through construction.
- Prepared the detour and traffic accommodation strategy that kept two lanes open in each direction through peak hours.

Design Engineer | Chinook Municipal Consulting 2013 – 2016

- Modelled sanitary and storm networks for three new subdivisions in PCSWMM and sized trunk mains and ponds.
- Produced tender drawings and specifications for water main renewals across 40 blocks.
- Reviewed developer submissions against municipal standards and drafted the conditions of approval.
- Supported field crews during commissioning, logging deficiencies and verifying fixes.

Engineer-in-Training | Foothills Transportation Group 2010 – 2013

- Carried out traffic counts and signal timing studies for twelve intersections and recommended phasing changes.
- Drafted pavement rehabilitation designs and quantity estimates for rural highway segments.
- Inspected culvert replacements and wrote daily site reports for the resident engineer.
- Assembled as-built drawings and closeout packages for six completed contracts.

Junior Engineer | Red Deer Regional Water Commission 2009 – 2010

- Calibrated the hydraulic model for the regional transmission main and flagged three pressure zones short of fire flow.
- Drafted the tender package for a reservoir recoating contract and answered bidder questions during the tender period.
- Compiled monthly operating reports on pumping, storage levels and water loss for the commission board.
- Updated record drawings for 18 km of transmission main after field verification of valves and chambers.

Survey Technician | Alberta Geomatics 2009

- Ran total station and GNSS surveys for subdivision layouts, road profiles and as-built pickups.
- Processed field data into base plans and cross-sections for the design teams.
- Set out construction stakes for grading, curbs and underground utilities on six residential stages.
- Maintained instrument calibration logs and trained two new technicians on field procedures.

Field Engineer | Westmount Constructors 2008 – 2009

- Coordinated subcontractors on a mixed-use podium, tracking RFIs, submittals and the three-week lookahead schedule.
- Checked formwork and shoring layouts against the engineer's drawings before each concrete pour.
- Kept the site's deficiency list current and walked it with the owner's representative every Friday.
- Measured quantities for monthly progress billing and reconciled them with the cost engineer.

Engineering Co-op | City of Lethbridge 2006 – 2008

- Surveyed sidewalk and curb deficiencies and built the first GIS layer of repair priorities.
- Helped prepare the annual capital works report for the transportation department.
- Checked contractor progress claims against field measurements.
- Logged pavement condition ratings for 300 road segments and entered them into the asset system.

Projects

Bow River Pathway Bridge (volunteer design review) 2022

- Reviewed the pedestrian bridge's foundation and deck design for a community association and wrote the summary for council.
- Ran a load rating check on the existing timber approach spans and recommended a weight limit.

Open-source culvert sizing calculator 2019

- Wrote a small web tool that sizes culverts from catchment area and rainfall intensity, used by two municipal teams.
- Documented the method and its limits so reviewers could check each result by hand.

Licences & Certifications

- Professional Engineer (P.Eng.), APEGA, 2014
- Project Management Professional (PMP), 2018
- Erosion and Sediment Control Lead, 2017

Skills

Design: Civil 3D, AutoCAD, MicroStation, PCSWMM, HEC-RAS, Synchro

Delivery: Tendering, contract administration, change orders, cost control, scheduling (MS Project, P6)

Education

- BSc Civil Engineering | University of Calgary | 2010
